

TrackMyFilm — Owner Guide & Documentation

Last updated: April 2026 Built for Yours Durham by Daniel Matias

How to Log In

Go to **trackmyfilm.com** and sign in with:

- **Email:** hello@yoursdurham.com
- **Password:** [YoursDurham2026!](#)

Forgot your password? Click "Forgot password?" on the login page → enter your email → check hello@yoursdurham.com for a reset link → click it → set a new password. You'll be redirected to the dashboard automatically.

The Three Pages

1. Dashboard (</dashboard>)

The main page. Every film order appears as a card.

- Filter orders by status using the tabs at the top
- Search by customer name or order number
- Click **New Drop-off** to log a new order
- Click **Update Status** on any card to advance the order

2. Customers (</customers>)

A full table of all 529+ customers.

- Search by name, email, or order number
- Click any row to expand it and edit their details inline
- All edits save automatically when you press Enter or click away
- Delete a customer using the button in the expanded row

3. Tracking (</tracking>)

What customers see when they look up their order. They enter their order number or email address and see the current status and timeline.

The Full Workflow — Step by Step

Step 1 — Customer drops off film

Click **New Drop-off** on the dashboard. Fill in:

- Customer name and email

- Order number (e.g. JE1234)
- Drop-off date
- Number of rolls
- Film type (35mm or 120)
- Film process (Color, Black & White, or Both)
- Film stock (optional)
- Notes (optional — internal only, never shown to customers)

The system will automatically:

- Find the customer if they already exist (matched by email first, then name)
- Create a new customer record if they're new
- Log the order with status **"Received by Yours"**
- Send a confirmation email to the customer

Email toggle: A checkbox at the bottom of the form says "Send confirmation email." It is on by default. Uncheck it if you don't want to send an email for a specific drop-off (e.g. if the customer has no email, or you're logging an old order).

Step 2 — Drive film to the lab in Raleigh

Find the order card on the dashboard. Click **Update Status → Received at Lab**.

The system will:

- Update the order status
- Send the customer an email saying their film has arrived at the lab

Step 3 — Lab sends scans back

When you receive the WeTransfer link from the lab, click **Update Status → Scans Sent** on the order card.

A box will appear asking you to paste the WeTransfer download link. Once confirmed:

- The link is saved permanently to the order
- The customer receives an email with their download link
- The order card shows **Copy link** and **Open** buttons for your reference

The WeTransfer link is stored in the database forever. You can always go back to the order card to copy or open it later.

Emails — What Gets Sent and When

There are exactly 3 emails, one per status:

Status	Email	When it sends
Received by Yours	Confirmation	Automatically when drop-off is logged

Status	Email	When it sends
Received at Lab	Lab update	When you click "Update Status → Received at Lab"
Scans Sent	Download link	When you click "Update Status → Scans Sent" and paste WeTransfer link

No email is sent if:

- The customer has no email address on file
- The "Send confirmation email" checkbox was unchecked when logging the drop-off

If an email fails: A red "⚠ Email failed to send" banner appears on the order card with a **Retry** button. Click it to try again.

Customizing Email Templates

All 3 email templates are managed entirely in your **Resend dashboard** at resend.com. Log in → Templates. You can change anything about them without touching any code.

What you can freely change

- Subject line
- Body text, wording, tone
- Layout and design
- Logo, colors, fonts
- Any static content (turnaround times, store hours, policies, etc.)

Variables — do not rename these

The system automatically fills in these placeholders when sending. The names must stay exactly as written:

Variable	What it inserts
{{first_name}}	Customer's first name (e.g. "Sarah")
{{order_number}}	The order number (e.g. "JE1234")
{{roll_count}}	Number of rolls (e.g. "3")
{{wetransfer_link}}	The WeTransfer download URL (scans_sent email only)

If you rename a variable — for example changing `{{first_name}}` to `{{name}}` — the email will send with the literal text `{{name}}` showing instead of the customer's actual name. Don't rename them; only change the text around them.

The `scans_sent` Template — Important

This template **must include** `{{wetransfer_link}}` somewhere in the body, otherwise customers won't receive their download link. Here is a complete example you can use as a starting point:

Subject: Your scans are ready — download here!

Body:

```
Hey {{first_name}}!

Great news — your scans for order #{{order_number}} ({{roll_count}} rolls)
are ready.

Download your scans here:
{{wetransfer_link}}

The link expires after 7 days so download soon.

Your negatives are being held at our Durham store for 60 days after
processing. If you'd like them back, just reply to this email or stop by.

Thanks for developing with us!
— The Yours Durham team
```

Feel free to change the wording completely. Just keep `{{wetransfer_link}}` in there so the link comes through.

After editing: Click **Publish** in the Resend template editor. Templates in "Draft" status will not send to customers.

Suggested subject lines

Template	Suggested subject
film_drop_received	We've got your film!
film_at_lab	Your film is at the lab
scans_sent	Your scans are ready — download here!

What You Can Change (Summary)

What	Where
Email content, subject, design	Resend dashboard → Templates
Customer details (name, email, notes, rolls)	Customers page → click any row
Order status	Dashboard → card → Update Status
WeTransfer link on an order	Dashboard → card → Update Status → Scans Sent
Password	Login page → Forgot password

What You Cannot Change (Without a Developer)

- The 3 status names — they are fixed in the system
- The order of statuses — always Received by Yours → Lab → Scans Sent
- Adding new status types
- The WeTransfer link validation (only accepts wetransfer.com links)
- The login email — only hello@yoursdurham.com has access
- The tracking page design

The Customer Table — Column Reference

Column	What it means
Email	Used for sending emails and finding existing customers
First Name	First name only — do not put full name here
Last Name	Last name only
Date	Date of their most recent drop-off
Order #	Most recent order number
Current Rolls	Rolls in the most recent drop-off
Total Rolls	All rolls across every drop-off ever
Drop-off Count	Total number of drop-offs from this customer

Customer Deduplication — How It Works

When logging a new drop-off, the system finds or creates the customer automatically:

1. Searches by **email** first (exact match, case-insensitive)
2. If no email match, searches by **name** (case-insensitive, ignores extra spaces)
3. If no match found → creates a new customer

This means:

- "John Smith" and "john smith" are treated as the same person
- "Jon Smith" and "John Smith" are treated as **different** people
- Always enter the customer's email when possible — it's the most reliable way to avoid duplicates

The WeTransfer Link

When you update an order to "Scans Sent" and paste the WeTransfer link:

- It is **saved permanently** to the order in the database
- It is **sent in the email** to the customer automatically
- It appears as **Copy link / Open** buttons on the order card
- It can be accessed any time from the Customers page → expand a customer → order history

WeTransfer links expire after 7 days. If a customer misses it, you can copy the link from the order card and send it manually — but if the WeTransfer itself has expired, you'll need to contact the lab for a new one.

Frequently Asked Questions

What if I log a drop-off with the wrong order number? Delete the order using the trash icon on the card, then re-create it with the correct number. Order numbers must be unique — duplicates are rejected.

What if a customer has no email? The drop-off is still logged. No email will be sent. You can add their email later on the Customers page, but it won't send any previously missed emails.

Can two customers have the same name? Yes — if they have different email addresses they'll be kept as separate records. If they have the same name and no email, the system treats them as one person. Use the Notes field to distinguish them.

What if the email fails and Retry doesn't work? Contact your developer. The most common cause is the sending domain not being verified in Resend.

Can I change the tracking page design? Not without a developer — it's part of the app code.

How do I change the password? Go to the login page → click "Forgot password?" → enter hello@yoursdurham.com → check your email for the reset link.

Developer Notes (Daniel)

Vercel — Environment Variables

All of these must be set in **Vercel → Project → Settings → Environment Variables**:

Variable	Value
NEXT_PUBLIC_SUPABASE_URL	From Supabase project settings
NEXT_PUBLIC_SUPABASE_ANON_KEY	From Supabase project settings
SUPABASE_SERVICE_ROLE_KEY	From Supabase project settings
RESEND_API_KEY	From Resend dashboard
RESEND_FROM_EMAIL	<a href="mailto:Yours Durham <no-reply@trackmyfilm.com>">Yours Durham <no-reply@trackmyfilm.com>
RESEND_TEMPLATE_FILM_DROP_RECEIVED	42f3637c-6e35-4229-bf5e-cf212180d9ef
RESEND_TEMPLATE_FILM_AT_LAB	b11e69ed-486d-4b7e-9eb3-0209e3baea91
RESEND_TEMPLATE_SCANS_SENT	9a4f158b-0edd-425d-967e-3da8004bb978
NEXT_PUBLIC_APP_URL	https://trackmyfilm.com
REPLY_TO_EMAIL	hello@yoursdurham.com
NEXT_PUBLIC_CONTACT_EMAIL	hello@yoursdurham.com

Custom Domain

- Vercel: trackmyfilm.com — A record pointing to 76.76.21.21, CNAME [www](https://www.cname.vercel-dns.com) → cname.vercel-dns.com
 - Resend: trackmyfilm.com already verified (DKIM + SPF both green)
-

Workflow Summary

Customer drops off film

↓

Log new drop-off → Status: "Received by Yours" → Email 1 sent

↓

Drive film to Raleigh → Update Status: "Received at Lab" → Email 2 sent

↓

Lab sends WeTransfer link → Update Status: "Scans Sent" → paste link → Email 3 sent with download link
